

FIGURE

Box and whisker plots display arterial blood pH, arterial blood pO₂, and arterial blood pCO₂ at 30 minutes of ventilation for 26-hour steroid treatment study animals and controls

Box margins represent 25th and 75th percentiles; horizontal line represents median value. The asterisks represent statistically significant difference from negative control ($P < .05$). The double daggers represent outlier values > 1.5 times the interquartile range.

Presented, in part, at the 64th Annual Meeting of the Society for Reproductive Investigation, Orlando, FL, March 15–18 2017, and the 69th Annual Congress of the Japan Society for Obstetrics and Gynecology, Hiroshima, Japan, April 13–16, 2017.

CORRECTION

April 2008 (vol. 198, no. 4, page 477.e6)

Lu C, Thaker PH, Lin YG, et al. Impact of vessel maturation on antiangiogenic therapy in ovarian cancer. *Am J Obstet Gynecol* 2008;198:477.e1-10.

In an article published in April 2008, one set of 3 images in a panel of 12 was inadvertently duplicated.

The erroneous images appeared in panel A, column 3 ("PDGF-Trap"), Figure 6, "Effect of dual endothelial and pericyte targeting on tumor vasculature." The conclusions put forth in the article remain unchanged.

The corrected panel appears below.

FIGURE 6

Effect of dual endothelial and pericyte targeting on tumor vasculature
